

IAQ CASE STUDY

09-11 NY

A national bank, whose Chicago location is a long-time client, contacted ESI 2 days after the 9-11 attack in NY city to request that ESI perform indoor air quality monitoring in its facility in New York City.

Immediately, two ESI licensed inspectors/project managers flew to the New York facility. A full-HVAC system inspection was performed assessing the indoor air quality for safety and to assure the health of all workers throughout the entire facility, public and employee areas. In addition, ESI performed a full inspection of the facility to identify any other exposure hazards.

Our full report, including detailed descriptions of locations and results, was presented to the client along with specific recommendations.
